

*It all adds up to cleaner air*

## Today's Breath of Fresh Air Tip:

### Let Your Hot Wheels Cool Off

In summer, when your car is hot from a long trip, let it cool off for a couple of hours before you put it in your attached garage. That way, you won't heat up your garage, which puts a strain on your home's air conditioner.

*It all adds up to cleaner air*

## Today's Breath of Fresh Air Tip:

### Water Sense Equals Energy Savings

Clean air and clean water are linked in many ways. Municipalities use electricity as well as chemical and mechanical means to clean, aerate and transport the water that flows from your tap. So it just makes sense to keep your home as water efficient as possible.

Just as there is an energy efficiency rating for appliances, EPA has introduced a new water efficiency rating system for water products and services, called Water Sense. When you buy Water Sense products, you know you are buying a super-efficient product or service that will save water and energy.
