

## High Gain 2 Meter Antenna Workshop

**9/21/2010**

This workshop was planned and directed by Frank Bigelow, KG6TQV using partially assembled kits that he provided. Known as “attic antennas” these antennas are intended primarily for indoor use and are tuned to the 2 Meter band.

Frank, KG6TQV

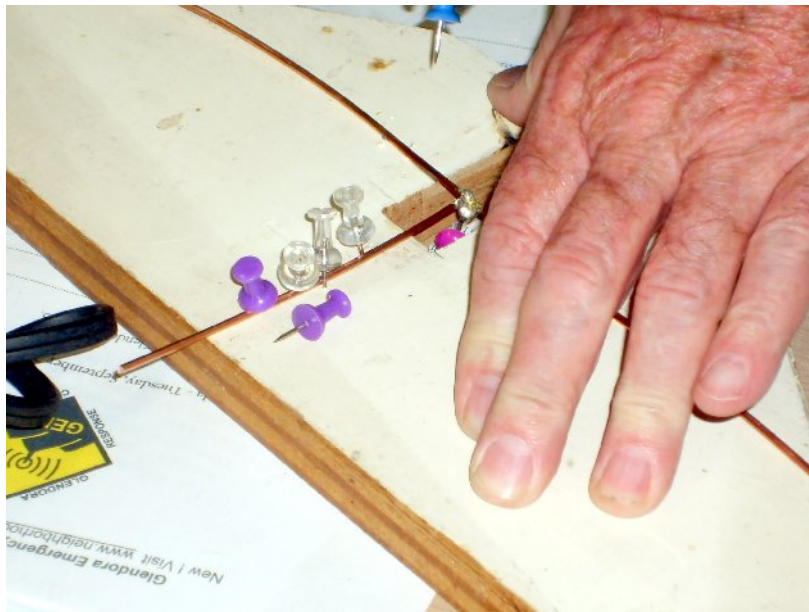

The hams were briefed on construction tips.

Precise measurements were required

Richard, (l)KG6TRD and Pat, (r)KG6LQQ help Tom, KB6JVE align the element stubs prior to soldering.

Frank built "jigs" for the hams to align and hold their element stubs while soldering

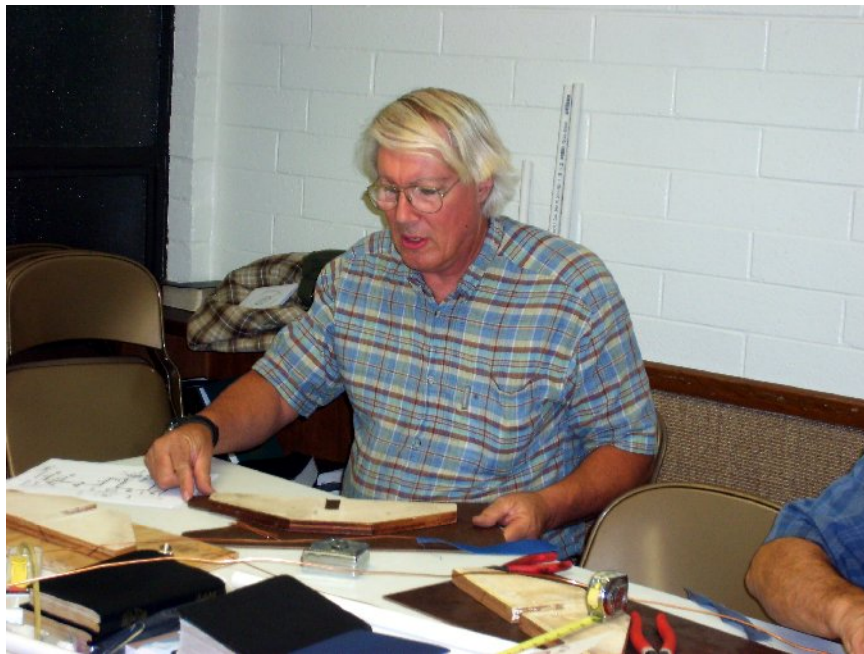

Kent, KD6BOO carefully measures the main element

Jim KG6TQT and Keith KG6TPU patiently wait their turn.

Cliff, KF6RFA works among the dozens of PVC pipes used in the project.

Scott, KF6RPA carefully contemplates his next step.

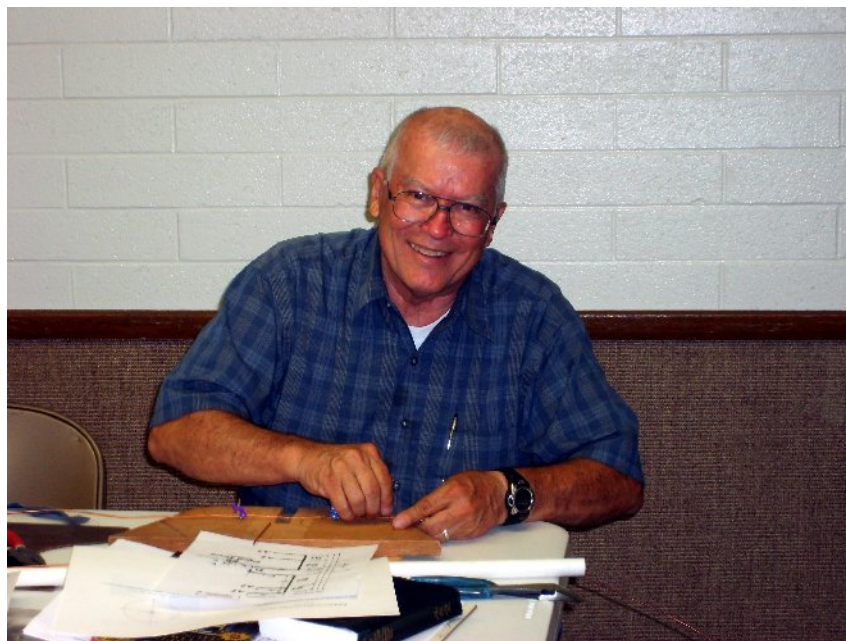

Mark, N7YLA takes a snapshot of Frank

While Frank takes a snapshot of Mark!

Tom, KI6YCC happily works on his project

**We all enjoyed this workshop and the opportunity to work together on our antennas! Thanks to Frank for his many hours of preparation!**
