

Prevent Pipes From Freezing This Winter

1/17/2017

An Hour of Your Time May Be What Prevents a Home Emergency

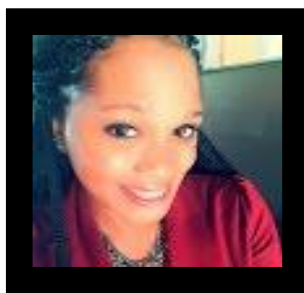

Your home is probably the most valuable asset you own. At times, yes, there will be unforeseen and possibly costly repairs that are needed; therefore, we should make every effort to reduce if not eliminate those occurrences.

Prevention of damage to your home is of utmost importance. Each winter, frozen pipes result in significant damage to properties – and the property owner's pockets!

DIY projects are my favorite – No labor expenses and I get to take credit for the outcome!

Can't Say You Didn't Try!

By following the simple steps in the next section you've made a tremendous effort to prevent frozen pipes in your home this winter. And like I always say....Nothing beats a failure but a try!

Simple Steps That May Help To Prevent Frozen Pipes

• • •

- Keep temperatures above 50 degrees Fahrenheit at all times.
- Seal and repair spaces around doors and windows that allow air flow.
- Fill cracks and holes in wall that allow air flow.
- Winterize water base fire protection systems.
- Increase pipe insulation.
