

Flood at Building 130- HOA Does not follow up

The buildings on a concrete pad ....where did the water go?

Now its been 1 week since the flood and the water remains in the ceilings and walls of Building 130 without any mitigation. It would appear that they are doing nothing and have not pulled any permits for removing Asbestos and wet drywall in Unit 107, 207 and common hallways.

Are they informing anyone.....?....No nothing has been sent to the homeowners as the HOA and ACM drag there feet after a whole week of the standing water causing possible structural damage, as well as, mold and mildew

Building 130 Suffers flood from Unit 207 who left his bathtub running and overflowing for many hours flooding the unit below and the common area walls and ceilings

The ceiling contain 8% asbestos in the popcorn, Even though the floor was air dried, the water is still in the walls from the Incident that occurred Thursday morning September 29th 2022

Today is 10/6/2022 and there has been not attempt to dry out the walls or fix ceiling and it is very likely that the ceiling could collapse.
