

Basic Radio Connector Storage Organizer

The organizer is made using cardboard, paper clips, rubber bands, clear tape, and a printed sheet with the connector labels and photo. The photo sheet is taped to the cardboard. Holes are punched through the card. A rubber band is threaded through the holes and captured on the back side of the cardboard using paper clips.

The actual connector is positioned under the rubber band in its designated position using the labels and the photo as reminder / guide.

The organizer with the connectors are placed inside a “snack” size zip closure plastic bag in an attempt to minimize dust exposure for the fittings.
